

CONTROL the **Coffee Leaf Rust** **Disease**

PROTECT YOUR COFFEE MONEY

Coffee Leaf Rust

This is a serious disease

If small round yellow spots
appear on the leaves of
your coffee trees .

ask your
extension officer for advice

CONTROL THE COFFEE LEAF RUST

— APPLY CHEMICAL SPRAYS REGULARLY

These will prevent the growth and development of the fungus. Sprays should be applied just before the beginning of the rainy seasons.

— REGULATE SHADE

Too much shade will provide warm wet, dark conditions which can cause the fungus to grow and spread.

Insufficient shades causes overbearing and dieback of branches.

— FERTILIZE COFFEE TREES

Trees which have been fertilized will be better able to withstand disease attacks and will give higher yields.

— PRUNE COFFEE TREES

Crowded conditions will cause the disease to spread and will prevent effective applications of spray.

Remember...

NO CONTROL MEANS LOWER YIELDS

The disease can be controlled by

- **APPLYING CHEMICAL SPRAYS**
- **IMPROVING CULTURAL PRACTICES**
